

## Canton of Neuchâtel (Switzerland)

Innovate to get Closer to the Citizens

### Description

The Swiss Canton of Neuchâtel chose ScytI's technology to bring to its e-government portal "Guichet Unique" a secure electronic voting system. This platform is one of the only three permanent internet voting platforms in the world for binding elections and consultations. Since 2004 the platform has been used to carry out from 3 to 6 citizen consultations, binding electoral processes and referenda each year. Internet channel has received up to 60% of the total votes tallied.

In June 08, people living abroad have been allowed to vote through the Internet for the first time using the ScytI's Technology.

### Objectives

By introducing Internet voting, the Canton of Neuchâtel wanted to go further in their e-government program and facilitate the voting process to their citizens residing in the Canton and abroad.

### Testimony

*"We integrated Phyx, ScytI's electronic voting solution, into the framework of our e-government and e-democracy projects. This innovative solution demonstrated in various aspects its high security and flexibility levels. ScytI provided us not only with a product but also with a very competent team that allowed us to set up a really innovating experience for our voters."*
